

Artificial Intelligence : Human Intelligence exhibited by machine.

Narrow AI : Computers can do a specific/one thing very well.

General AI : Computers can do multiple things like humans. We are very far away from this.

Machine Learning : Approach to try and achieve AI through systems that can find patterns in data. Stanford Univ - Science of getting computers to act without being explicitly programmed.

Deep Learning : One of the techniques to implement machine learning.

Data Science : Analysing Data

Framework

Steps in a full machine learning project

1. Problem Definition

Types of machine learning

When not to use machine learning ?

- Will simple hand coded instructions based system work ? If yes, then use it.

Main types of machine learning

**Supervised
Learning**

**Unsupervised
Learning**

**Transfer
Learning**

**Reinforcement
Learning**

Supervised learning

Classification

- “Is this example one thing or another?”
- Binary classification = two options
- Multi-class classification = more than two options

Regression

- “How much will this house sell for?”
- “How many people will buy this app?”

Unsupervised learning

Customer ID	Purchase 1	Purchase 2
1	Sunglasses	Singlet
2	Jacket	snow boots
3	Sunscreen	Beach towel

Transfer Learning

Reinforcement Learning

Problem Definition

Matching your problem

**Supervised
Learning**

“I know my inputs and outputs.”

**Unsupervised
Learning**

“I’m not sure of the outputs but I have inputs.”

**Transfer
Learning**

“I think my problem may be similar to something else.”

2.Data

“What kind of data do we have?”

Types of Data

Columns

Rows

ID	Weight	Sex	Blood Pressure	Chest pain	Heart disease?
4328	110kg	M	120/80	4	Yes
5681	64kg	F	130/90	1	NO
7911	81kg	M	130/80	0	NO

Table 1.0: Patient records

Structured

From: daniel@mrdbourke.com
Hey Daniel,

First of all, thank you for being so amazing.
This machine learning course is incredible.
Thank you for keeping it simple!

Unstructured

Types of Data

ID	Weight	Sex	Blood Pressure	Chest pain	Heart disease?
4328	110kg	M	120/80	4	Yes
5681	64kg	F	130/90	1	No
7911	81kg	M	130/80	0	No

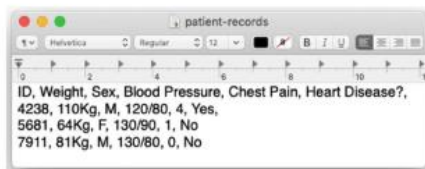

Table 1.0: Patient records

Static

Streaming

A data science workflow

patient-records

```
ID, Weight, Sex, Blood Pressure, Chest Pain, Heart Disease?,  
4238, 110Kg, M, 120/80, 4, Yes,  
5681, 64Kg, F, 130/90, 1, No  
7911, 81Kg, M, 130/80, 0, No
```

Static data

ID	Weight	Sex	Blood Pressure	Chest Pain	Heart disease?
4528	110kg	M	120/80	4	Yes
5681	64kg	F	130/90	1	No
7911	81kg	M	130/80	0	No

Table 1.0: Patient records

pandas

$$y_{it} = \beta^T x_{it} + \mu_i + \epsilon_{it}$$

↓ Data Analysis

matplotlib

Machine learning model

3. Evaluation

“What defines success for us?”

**“For this project to be worth pursuing further,
we need a machine learning model with over 99% accuracy.”**

ID	Weight	Sex	Blood Pressure	Chest pain	Heart disease?
4528	110kg	M	120/80	4	Yes
5681	64kg	F	130/90	1	No
7911	81kg	M	130/80	0	No

Table 1.0: Patient records

Accuracy

97.8%

**Machine learning
model**

Types of metrics

Classification

Accuracy

Precision

Recall

Regression

Mean absolute error (MAE)

Mean squared error (MSE)

Root mean squared error
(RMSE)

Recommendation

Precision at K

Classifying Car insurance claims

Data		Label	
ID	Img	Text	Result
1		Hi, I crashed into the neighbours letterbox and dented my car.	At fault
2		Someone ran into the back of me whilst I was at the traffic lights.	Not at fault

Table 2.0: Car insurance claims

(had to try a few of these)

Machine learning
model

Minimum accuracy
>95%

4. Features

“What do we already know about the data?”

Feature variables can be

- Numerical
- Categorical

Feature engineering

- Deriving new features from existing one.

Feature Coverage

- Checking if values are correctly populated for a feature or not ? Do not use it if it is not well covered.

Feature variables					Target variable	Derived feature	
ID	Weight	Sex	Heart Rate	Chest pain	Heart disease?	visit in last year?	Most eaten food
4328	110kg	M	81	4	Yes	Yes	Fries
5681	64kg	F	61	1	No	Yes	?
7911	81kg	M	57	0	No	No	?

Table 1.0: Patient records

5. Modelling Part 1 — 3 sets

“Based on our problem and data, what model should we use?”

3 parts to modelling

1. Choosing and training a model

or

2. Tuning a model

3. Model comparison

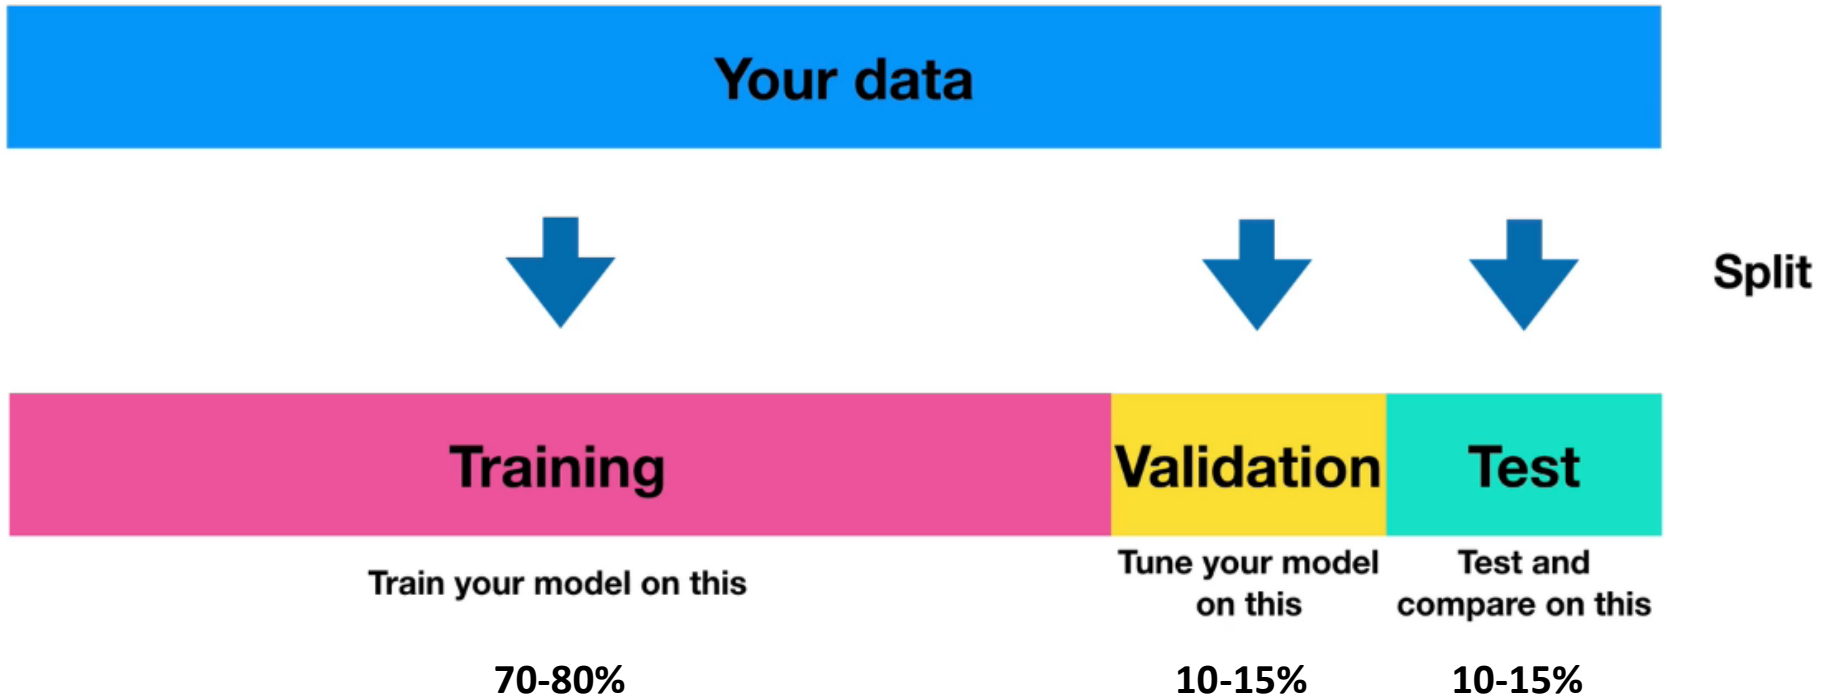

vs.

vs.

Training, validation and test sets

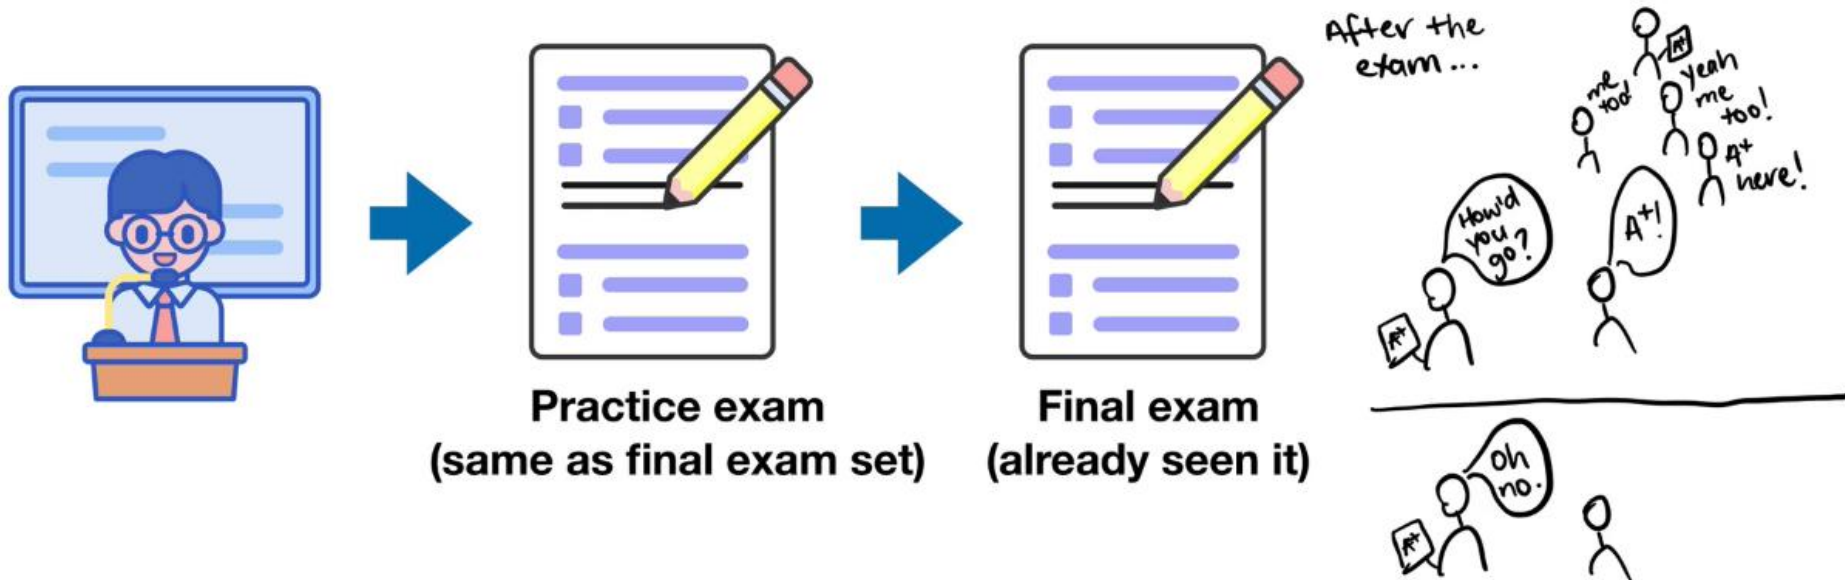

3 sets

Generalization – The ability for a machine learning model to perform well on data it hasn't seen before.

When things go wrong ?

Machine really did not learn anything, it just memorized what it solved in training part.

5. Modelling Part 2 — Choosing

“Based on our problem and data, what model should we use?”

Choosing a model

Problem 1

Model 1

Structured Data

CatBoost

Random Forest

Problem 2

Model 2

Unstructured Data

Deep Learning

Transfer Learning

Training a model

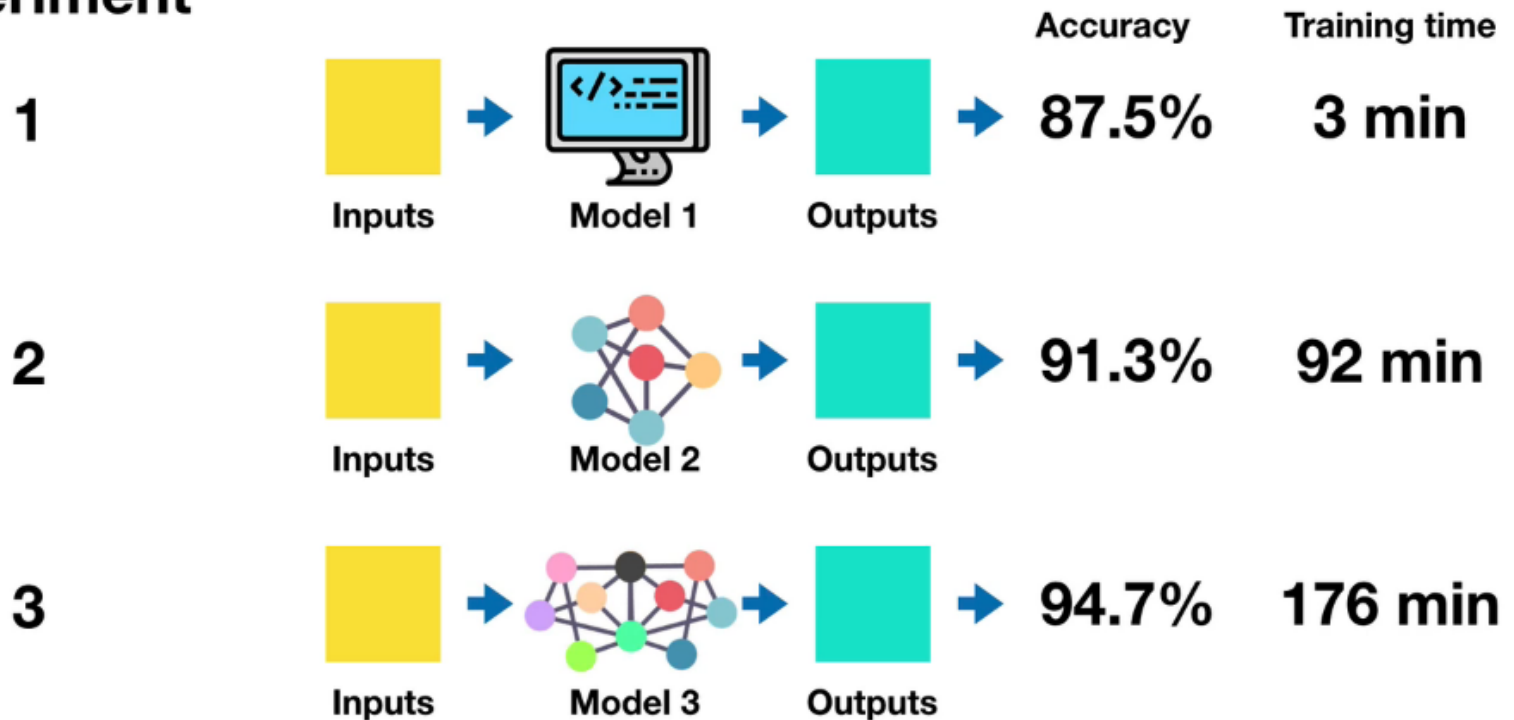

X (data)					y (label)
ID	Weight	Sex	Heart Rate	Chest pain	Heart disease?
4328	110Kg	M	81	4	Yes
5681	64Kg	F	61	1	No
7911	81Kg	M	57	0	No

Table 1.0: Patient records

Training Data

Goal - Minimize time between experiments

Experiment

Sometimes for smaller %age extra of Accuracy, we end up spending lot of time. We should avoid that.

Remember

- **Some models work better than others on different problems**
- **Don't be afraid to try things**
- **Start small and build up (add complexity) as you need**

5. Modelling Part 3 — Tuning

“Based on our problem and data, what model should we use?”

Tuning

Cooking time: 1 hour
Temperature: 200°C

Tuning...

Random Forest

Neural Networks

Remember

- Machine learning models have hyperparameters you can adjust
- A models first results aren't its last
- Tuning can take place on training or validation data sets

5. Modelling Part 4 — Comparison

“How will our model perform in the real world?”

Model performance

Data Set	Performance
Training	98%
Test	96%

Underfitting
(potential)

Data Set	Performance
Training	64%
Test	47%

Overfitting
(potential)

Data Set	Performance
Training	93%
Test	99%

Overfitting and Underfitting

Underfitting

Balanced
(Goldilocks zone)

Overfitting

Overfitting and Underfitting

Overfitting and Underfitting

Fixes for Overfitting and Underfitting

Underfitting

- Try a more advanced model
- Increase model hyperparameters
- Reduce amount of features
- Train longer

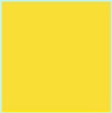

Overfitting

- Collect more data
- Try a less advanced model

Comparison

Experiment

				Accuracy	Training time	Prediction time
1		→ 	→ 	→ 87.5%	3 min	0.5 sec
	Inputs		Model 1			Outputs
2		→ 	→ 	→ 91.3%	92 min	1 sec
	Inputs		Model 2			Outputs
3		→ 	→ 	→ 94.7%	176 min	4 sec
	Inputs		Model 3			Outputs

Remember

- **Want to avoid overfitting and underfitting (head towards generality)**
- **Keep the test set separate at all costs**
- **Compare apples to apples**
- **One best performance metric does not equal best model**

6. Experimentation

“How could we improve/what can we try next?”

Experimentation

- Try out a different approach for improving the machine learning model
